To whom it may concern:

I recently placed an EcoQuest air purifier in my 5th grade classroom. During the H1N1 outbreak at our school, my classroom had the lowest amount of sickness in our school. There was a 2-3 week period where classes were missing anywhere from 4-18 students. The most students I had absent during that time period was 1-3. There were a few days where my classroom was the only one in the whole school that had no one absent. The combination of constant hand washing, sanitizing of germ-filled surfaces, and the cleaning of the air from the air purifier caused my class to be least effected by the H1N1 and a few other contagious viruses that have spread throughout our school this year. I'm happy with my air purifier placement in my classroom.

Sincerely,

Rebecca Schpero
