

To the Staff of EcoQuest,

We at Harrison's Funeral Home Inc. Orange Mound Chapel first of all would like to thank you for giving us the opportunity to use your Fresh Air by EcoQuest air purification system.

Upon entering our preparation room before installing the Fresh Air unit, the air in the room was filtrated with embalming chemicals, which can be unbearable and sensitive to the mucus membranes. Once we installed the unit and set it to the maximum (3,000 ft) setting which was incorrect, there was a big difference within 15 minutes in the air that we breathe. After setting the unit to 250ft we can tell that we were inhaling clean air. The next day we entered the building and we could tell a big difference in the entire building.

Our experience was just a breath of fresh air while working in such a hostile environment.

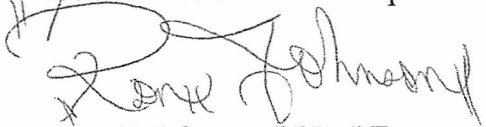

We think that this is a MUST HAVE in a funeral home. It seems to break through the thickest of fumes we possibly inhale during the embalming process of human remains.

Once again we want to thank you for the trial use of this machine. We look forward to possibly owning one of our own.

Sincerely,

Jerry M. Harrison, AFD
