Why did I become a Ecoquest Dealer? Because it works! I have people at my work place ask me "what I am on" and I tell them, it's what I am off! A Zyrtec every night and a Allegra D every morning, I used Flonase, took a weekly allergy shot and used my Asthma inhaler. I no longer need these. The monthly cost of these medications was enough to pay for my machine in less than five months.

I came across this marveolous machine quite by accident while out house hunting. After viewing a very clean and neat home I thought this "smells like the cleanest house I have ever been in". The owner just happened to be an Ecoquest dealer and he had had the same health related problems that I was dealing with.

He offered me a free home trial and I could say that was the end of the story, but it was the beginning. Not only was I sold on the machine, but I wanted one for eash of my four kids and their families (they inherited my sinus, allergy and asthema genes) so I became a Dealer.

I am not a salesman, but I love to tell people that they might be able to live without all or most of the medications they may be taking for breathing related illnesses, just like I do. I have more energy than ever before (no allergy fatigue) and I almost never take anything for a headache, compared to six months ago, when I took something almost four times a day.

I wish that I had known about this machine 18 years ago when they first started to make them, while my family was still at home, maybe I would have had the energy to keep up with them and not had to drag through fun activities because I had a headache or a sinus something going on. We need to pass this machine out to as many people that we can or at least tell them about it, so that they can have the opportunity to choose to live healthier, more quality lives.
