

1-12-2011

Dear Joan,

We have 3 beautiful children Melody(8), Matthew(4), Micah(2.5). The boys are both autistic and have many developmental/ physical delays. They both have texture eating disorders that make them very picky eaters. Along with the picky eating follows a very poor diet high in carbohydrates and sugars.

These things all have caused significant gastrointestinal problems for the both of them. Both the boys had moderate to severe constipation due to their diet sometimes going a week in between bowel movements. This caused extreme pain and discomfort along with many emergency room visits and many different medications. On top of that both of us have not gotten a good night's sleep for years due to these issues causing them to scream uncontrollably through the night. Once we started them on LivingWater within 24 hours they had cleaned themselves out and have been regular since.

Not only did we experience relieved children, we are now having quiet nights. If that wasn't enough within a week our youngest son Micah started making developmental gains in leaps and bounds. Matthew has also seen significant improvement. To the amazement of many professional special needs teachers and therapists, we literally have different children now. We are excited for our children and thanks to LivingWater our family is doing great.
